

MEMORANDUM FOR :

SUBJECT : The ABM Study

Enclosed are two documents on the ABM Study which might be of interest to you. As you know, the ABM Study deals with evaluation of the relative effectiveness of collection systems used, or projected for use, against the Soviet ABM.

The first document is a brief statement of the concept and status of the Study. The second is an Interim Report; it describes the Network, which represents one of the two major input phases of the Study. The Network structures ABM information needs and includes the relative values of these needs as well as the associated accuracies.

We would welcome comments or suggestions.
